1 Variable description

1.0.1 Background study to gain the domain expertise to find the appropriate relationships

```python
#import pandas as pd
#import os
#df = data
#df['date'] = pd.to_datetime(df['date'])
#df['year'] = df['date'].dt.year
#df['month'] = df['date'].dt.strftime('%b')
#grouped = df.groupby(['year', 'month'])
#for (year, month), group in grouped:
#    year_folder = str(year)
#    month_folder = month
#    os.makedirs(os.path.join(year_folder, month_folder), exist_ok=True)
#    group = group.drop(['year', 'month'], axis=1)
#    file_path = os.path.join(year_folder, month_folder, f"{year}_{month}.csv")
#    group.to_csv(file_path, index=False)
#    print(f"Saved: {file_path}")
```

2 Relationships Between Solar and Environmental Variables

2.1 1. Solar Radiation and Solar Energy

Solar Radiation (W/m²) represents the instantaneous measure of sunlight energy received at a specific location.

Solar Energy (MJ/m²) is the cumulative energy received over time, typically aggregated daily, hourly, or monthly. The conversion from solar radiation to solar energy involves integrating radiation over time:

$$\text{Solar Energy (MJ/m}^2) = \int \text{Solar Radiation (W/m}^2) \, dt$$

2.2 2. Solar Radiation, Solar Energy, and PV Output

PV Output (kWh) depends significantly on solar radiation, as photovoltaic (PV) panels convert sunlight into electricity. Several factors affect this conversion:

- **Solar Energy** - More solar energy generally results in higher PV output, assuming constant efficiency.
- **Panel Efficiency** - Determines how much of the solar energy is converted to electricity.
- **Panel Area** - Affects the total energy captured.

A simplified relationship can be expressed as:

$$\text{PV Output (kWh)} \approx \text{Solar Energy (MJ/m}^2) \times \text{Panel Efficiency} \times \text{Panel Area} \times \text{Conversion Factor}$$

where the conversion factor adjusts MJ to kWh.

2.3 3. Weather Variables Affecting Solar Radiation

- **Cloud Cover (%)** - More clouds mean less sunlight reaches the panels, reducing both solar energy and PV output.
- **Humidity** - Can influence cloud formation and atmospheric scattering, indirectly affecting solar radiation.
- **Pressure (millibars)** - While not directly affecting solar radiation, pressure changes can indicate weather patterns influencing cloud cover.

2.4 4. Temperature Effects

- **Temp Min & Temp Max** - Temperature fluctuations impact PV panel efficiency:
  - High temperatures decrease efficiency due to increased electrical resistance and overheating.
  - Low temperatures can improve efficiency slightly but might coincide with reduced solar radiation due to overcast or snowy conditions.

2.5 5. UV Index

The **UV Index** indicates solar intensity, particularly in the shorter wavelength range. While PV panels primarily use visible and infrared light, high UV indices often correlate with strong solar radiation. UV levels are influenced by:

- **Cloud Cover** - Can significantly reduce UV radiation.
- **Altitude** - Higher altitudes receive more UV radiation due to reduced atmospheric filtering.

2.6 6. Precipitation and PV Output

Precipitation (mm) can influence PV performance by:

- **Cleaning Panels** - Light rain can wash away dust and improve efficiency.
- **Obstructing Sunlight** - Heavy rain and cloud cover reduce solar radiation, lowering PV output.

This document provides insights into how solar radiation, environmental factors, and PV output are interconnected. Understanding these relationships helps optimize solar energy utilization and forecasting.

2.6.1 Importing and validating the dataframe

```python
import numpy as np
import pandas as pd
import os
import matplotlib.pyplot as plt
import seaborn as sns
import time
from functools import wraps
from typing import Any, Callable
import logging
import polars as pl
import dask.dataframe as dd
from ydata_profiling import ProfileReport
from scipy import stats
from scipy.stats import shapiro
from statsmodels.stats.stattools import omni_normtest
import plotly.graph_objects as go
from plotly.subplots import make_subplots
import torch
import torch.nn as nn
import torch.optim as optim
from sklearn.model_selection import train_test_split
from sklearn.preprocessing import StandardScaler, MinMaxScaler
from sklearn.linear_model import LinearRegression, Ridge, Lasso, ElasticNet
from sklearn.ensemble import RandomForestRegressor, GradientBoostingRegressor
from sklearn.svm import SVR
from sklearn.tree import DecisionTreeRegressor
from sklearn.pipeline import make_pipeline
from sklearn.neural_network import MLPRegressor
from sklearn.metrics import mean_squared_error, mean_absolute_error, r2_score
from torch.utils.data import DataLoader, TensorDataset
from dotenv import load_dotenv
import getpass
import os
```

2.6.2 Setting up the basic utility functions like logger and execution time counter

```python
class Logger:
    """Custom logger class for consistent logging across the application"""

    def __init__(self, name: str, log_file: str = 'app.log', level: int =
 ↪logging.INFO):
        self.logger = logging.getLogger(name)
        self.logger.setLevel(level)

        # Prevent adding multiple handlers
        if not self.logger.hasHandlers():
            formatter = logging.Formatter('%(asctime)s - %(name)s -
 ↪%(levelname)s - %(message)s')

            # Create log directory if needed
            if log_file and os.path.dirname(log_file):
                os.makedirs(os.path.dirname(log_file), exist_ok=True)

            # File handler
            file_handler = logging.FileHandler(log_file)
            file_handler.setFormatter(formatter)
            self.logger.addHandler(file_handler)

            # Console handler
            console_handler = logging.StreamHandler()
            console_handler.setFormatter(formatter)
            self.logger.addHandler(console_handler)

    def get_logger(self) -> logging.Logger:
        return self.logger

def timer_decorator(func: Callable) -> Callable:
    """Decorator to measure execution time of functions"""
    @wraps(func)
    def wrapper(*args, **kwargs):
        start_time = time.time()
        result = func(*args, **kwargs)
        end_time = time.time()
        execution_time = end_time - start_time

        # Fetch or create a logger
        logger = kwargs.get('logger')
        if logger is None:
            logger = Logger(func.__module__).get_logger()
```

```python
            logger.info(f"Function {func.__name__} took {execution_time:.4f}
 ↪seconds")
        return result
    return wrapper

7 DeepFCNN Architecture Table

Layer Number	Layer Type	Input Dim	Output Dim	Parameters	Purpose
1	Linear	[batch_size, 9]	[batch_size, 128]	9*128 + 128 = 1,280	Expands feature space to capture complex patterns
2	BatchNorm1d	[batch_size, 128]	[batch_size, 128]	256	Normalizes layer inputs for stable training, reduces covariate shift
3	ReLU	[batch_size, 128]	[batch_size, 128]	0	Introduces non-linearity to learn complex patterns
4	Dropout (p=0.3)	[batch_size, 128]	[batch_size, 128]	0	Prevents overfitting by randomly dropping 30% of outputs
5	Linear	[batch_size, 128]	[batch_size, 64]	128*64 + 64 = 8,256	Compresses representation while retaining important features
6	BatchNorm1d	[batch_size, 64]	[batch_size, 64]	128	Normalizes layer inputs for stable training
7	ReLU	[batch_size, 64]	[batch_size, 64]	0	Introduces non-linearity
8	Dropout (p=0.3)	[batch_size, 64]	[batch_size, 64]	0	Prevents overfitting by randomly dropping 30% of outputs
9	Linear	[batch_size, 64]	[batch_size, 32]	64*32 + 32 = 2,080	Further refines feature representation

Layer Number	Layer Type	Input Dim	Output Dim	Parameters	Purpose
10	BatchNorm1d	[batch_size, 32]	[batch_size, 32]	64	Normalizes layer inputs for stable training
11	ReLU	[batch_size, 32]	[batch_size, 32]	0	Introduces non-linearity
12	Dropout (p=0.2)	[batch_size, 32]	[batch_size, 32]	0	Prevents overfitting by randomly dropping 20% of outputs
13	Linear	[batch_size, 32]	[batch_size, 1]	32*1 + 1 = 33	Produces final regression output (PV output prediction)

7.1 Table Notes

- **Input Dim and Output Dim**: Represent the shape of the data at each layer, where `batch_size` is the number of samples in a batch.
- **Parameters**: Calculated as `input_dim * output_dim + output_dim` for linear layers (weights + biases), and scale/shift parameters for BatchNorm1d.
- **Total Parameters**: ~11,997 (sum of all layer parameters).
- **Purpose**: Explains the role of each layer in the context of regression tasks like PV output prediction.

7.2 Key Features

- **Deeper Architecture**: Three hidden layers ($128 \rightarrow 64 \rightarrow 32$) capture hierarchical features.
- **Batch Normalization**: Stabilizes training and allows for deeper networks.
- **Dropout**: Prevents overfitting, with higher rates (0.3) in early layers and lower (0.2) near the output.
- **ReLU Activation**: Introduces non-linearity for complex pattern learning.

7.3 Usage

- Suitable for non-sequential tabular data with complex, non-linear patterns.
- Use early stopping and validation loss monitoring to tune hyperparameters (e.g., dropout rates, layer sizes).

8.1 Q2 - Extracting data using LLMs

The accompanying PDF file is a data sheet that gives specifications for a number of hardware products available from GivEnergy. Use an open source Large Language Model of your choice to run inference optimally on a single or multi-node cluster to extract the data from this pdf to the best of its ability. Please provide a record of the prompts you use in your interaction with the

LLM.

```
load_dotenv()

INFO: HTTP Request: POST http://127.0.0.1:11434/api/generate "HTTP/1.1 200 OK"

Okay, so I'm trying to figure out how to help the user with their query. They provided a bunch of data in this format that looks like it's from some product specs or maybe a catalog. The user wrote "Please provide a summary…" but didn't specify what exactly they want summarized.

First, I need to understand what kind of information is here. It seems like each entry has things like capacity, voltage, current, technology, BMS info, operating temperatures, warranty, and other specs like weight, dimensions, etc. There are entries for different models, maybe Bat 2.6, Bat 5.2, Bat 8.2? Or perhaps it's part of a series with "Bat" as the model identifier.

The user might be looking to compare these products or get an overview. They could be a buyer trying to decide which model suits their needs, someone in product management wanting a quick reference, or maybe even someone doing market research.

Since the data is quite technical, the summary should probably highlight key features like energy capacity, voltage range, current capabilities, BMS details, temperature ranges, and any important certifications. Dimensions are also mentioned, so including those could be useful for installation purposes.

I should make sure to structure the summary clearly, maybe listing each model's main specs side by side. The user might also want to know about communication protocols or expandability, as indicated by things like "RS485 Modbus" and "BMS Upgradeable."

Wait, there are mentions of different currents: 30A, 60A, 85A. That probably refers to the maximum charging and discharging current. So including that in the summary would help users understand the power handling capabilities.

Also, the operating voltage range is consistent across models (43.2 - 58.5V DC), with a max of 59V. That's important for battery management and ensuring the units are compatible with different charging systems.

The BMS cycle life is mentioned as 10 years, but one model has "Unlimited Cycles / 10 Years," which might be a typo or specific to that model's offering. It's something to note, perhaps indicating high reliability.

Warranty details vary: some have 10 years, and others don't specify beyond the BMS. I should include that in the summary so potential buyers know what's covered.

The weight and dimensions are provided for each model, which could be relevant for transportation or storage considerations. Including them would make the summary more comprehensive.

I need to ensure the summary is concise but covers all these aspects without being overwhelming. Maybe grouping similar models together or highlighting the differences in capacity and current handling would help the user quickly identify which model fits their needs.

Lastly, the user might not have explicitly stated their use case, so covering a range of possibilities from residential to commercial applications could be beneficial. Including safety standards like UN 38.3 and IEC61000 adds reassurance on safety and compliance.

In summary, the user likely wants a clear, organized overview that highlights key specs for comparison. They might be making an informed decision, so providing detailed but digestible information is crucial.

It seems like you've shared a series of technical specifications for what might be battery systems or energy storage units. The data includes details like capacity, voltage, current, technology, BMS (Battery Management System) information, operating and storage temperatures, warranty, weight, dimensions, and other relevant specifications.

To provide a summary, here's an organized overview of the key points across the entries:

General Specifications
- **Capacity**: Ranges from 2.6kWh to 8.2kWh (or higher).
- **Voltage**: 51.2VDC or 43.2 - 58.5VDC operating range.
- **Current**: Maximum charging and discharging current varies between 30A, 60A, and 85A depending on the model.
- **Technology**: LiFePO4 (Lithium Iron Phosphate) cells are mentioned for all models.

- **BMS**: Pre-installed BMS with life cycling details. Some models mention "10 Years -10°C - 55°C -30°C -60°C" operating temperatures and "Unlimited Cycles / 10 Years" for certain models.
- **Warranty**: Varies, but many models include a 10-year warranty on the BMS and other components.
- **Certifications**: Includes UN 38.3, IEC61000, and IP65 ratings.

Dimensions
- Models vary in size:
  - Bat 2.6: 480mm x ? (Dimensions not fully clear)
  - Bat 5.2: 480mm x 202mm
  - Bat 8.2: 480mm x 198mm

Additional Features
- **Communication Protocols**: Includes RS485 Modbus and is stackable.
- **BMS Upgradeable**: Indicates that the BMS can be upgraded for enhanced functionality.
- **Safety Standards**: Includes UN 38.3 and IEC61000, which are safety certifications for batteries.

If you're looking for something specific, like a comparison between models or more detailed information on certain features, let me know!
